Statistical Physics And Chaos In Fusion Plasmas (Nonequilibrium Problems In The Physical Sciences And Biology)

Synopsis

Papers from twenty-nine of the world's leading scientists investigate the statistical properties of nonlinear dynamical systems, emphasizing their relation to the problem of plasma confinement. A powerful, new diagrammatic peturbation theory is presented for a first principles calculation of the Clump Kinetic equation, and for the first time, detailed calculations and experimental considerations describe the practical consequences of these correlations. Unique to this book is the collection of works on the problem of long-lived correlations in phase space of the Vlasov Poisson system. A new method of computing Lyapunov exponents from experimental data, and a method for calculating the splitting of periodic orbits in conservative systems are developed.

Book Information

Series: Nonequilibrium Problems in the Physical Sciences and Biology (Book 3)

Hardcover: 361 pages

Publisher: Wiley-Interscience; 1 edition (April 24, 1984)

Language: English

ISBN-10: 0471883107

ISBN-13: 978-0471883104

Product Dimensions: 1 x 6.8 x 9.8 inches

Shipping Weight: 1.6 pounds

Average Customer Review: 3.0 out of 5 stars   1 customer review

Best Sellers Rank: #10,371,152 in Books (See Top 100 in Books)   #52 in Books > Textbooks > Engineering > Nuclear Engineering   #1844 in Books > Engineering & Transportation > Engineering > Energy Production & Extraction > Nuclear   #5827 in Books > Science & Math > Physics > Solid-State Physics

Customer Reviews

feel very good . good product with high quality. New to making homemade bread. OK my neighbor love it,
