Vaccines, Autism And Childhood Disorders: Crucial Data That Could Save Your Child's Life

Synopsis

Autism is a complex disability resulting in brain damage, immune dysfunction, self-destructive behavior patterns, and unresponsiveness to other people. Recently, autism rates (and other childhood disorders) have skyrocketed. These increases closely parallel the growing number of mandatory vaccines. In some regions, 1 of every 150 children is now autistic. We have a national and potentially worldwide epidemic on our hands. Autism often strikes following an early childhood of apparently normal development. Many parents believe that childhood vaccines, especially MMR (measles, mumps and rubella), are responsible. Some studies confirm that vaccines may cause autism in certain predisposed children. However, health authorities deny that autism is linked to vaccines. Some studies support their position. Congress recently held several hearings to investigate the causes of, and cures for, this growing epidemic. The testimony hints at a medical coverup. This book chronicles Congressional efforts to expose the truth, summarizes vaccine studies on both sides of the debate, and provides parents with crucial data to make informed decisions.

Book Information

Paperback: 128 pages

Publisher: New Atlantean Press (January 1, 2010)

Language: English

ISBN-10: 1881217329

ISBN-13: 978-1881217329

Product Dimensions: 8.6 x 5.5 x 0.3 inches

Shipping Weight: 5.6 ounces

Average Customer Review: 4.0 out of 5 stars 7 customer reviews

Customer Reviews

"After reading this book, parents will be better educated on the subject and their consent will then be truly informed." -- F. Edward Yazbak, MD, FAAP, Pediatrician, Autism Researcher
"Neil Miller has once again provided us with an extraordinarily well-documented and important book." -- Bernard Rimland, PhD, Director, Autism Research Institute

Is Measles dangerous? Mumps? Rubella? Do vaccines still contain toxic mercury? Find out in this extremely well-researched and well-documented exposé. This comprehensive book includes 28 charts and graphs plus more than 500 references. As a concerned parent, you may now make informed, responsible decisions regarding the benefits and risks of vaccinating your child.

Excellent book - a must read for all parents of newborns!! The truth is out there -- there are also plenty of medical journals indicating problems with vaccines (from autoimmune diseases, diabetes, neurologic problems, deaths, etc), the media just doesn't publicize anything. Go with your gut - don't let any doctor bully you into doing something that may do more harm than good to your child.

This book was a little disappointing to me. I have so many vaccine books, including one by the same author, which is great, but this one pretty much had the same information as the other books I have. It does go into autism a little more. If you are just beginning to investigate the risks of vaccines, or want more information on autism, than this is a good book to read. If you are well into your research, I wouldn't waste your money.

I read any book on this topic, and while I learned alot about the MMR shot i didnt learn much about the others.Its all about the MMR shot.I wouldve liked to see a little more about the other vaccines.

This well written and straightforward book outlines the facts about vaccines and the vaccine industry that have been withheld from the public for too long. It details the statistics that show how children are unwittingly paying the price for the mass misinformation campaign waged by public health authorities and vaccine manufactureres. Vaccines are no longer about preventing disease, as they have become a legislated profit center for vaccine manufactureres and a number on the DOW. The manufacturers have been legislatively freed from liability, and can pay the FDA to fast track approval of their products. There are no checks and balances, and the public is forced to vaccinate or face difficulties getting their children into school, or worse, face jail or be fined. There are just too many injured children for the health community to continue to deny the connection between vaccines and autism, add/adhd, diabetes, allergies, asthma, and a host of other chronic neurological and immune disfunctions plaguing children at epidemic proportions. This book provides accurate statistics and historical data that puts the "miracle" of vaccines into perspective. It details the known hazards such as toxic heavy metals, formaldehyde, antifreeze and other ingredients, as well as the contaminants such as simian virus 40 and other cancer causing animal viruses that have

massively contaminated vaccines for decades. It also reveals how inadequate the testing requirements have been for getting vaccines approved, and how there have been no long term studies on overall outcomes or adverse reactions. The CDC recommends that children today need to get 48 doses of 14 different vaccines, at a time when their brains and neurological systems are undeveloped, before they can enter kindergarten. This book explains that by attempting to prevent every childhood illness, we are causing long term, chronic, impossible to cure illnesses in their place. Please give this book to friends and spread the word, as we are about to face a generation of children who are neurologically and immunologically impaired. There is a reason we are dropping so far behind other nations in math and science scores. We are the most highly vaccinated nation on earth and yet we fall short in the health and well being of our children.

My son became autistic at the age of 12 months immediately following the MMR vaccine. Vaccine-induced autism can be avoided simply by using vaccines that do not contain mercury, & by breaking up the vaccine load--give the M, then the M, then the R, not all at once. Remember, anything the disease can do to your child, the vaccine can do to your child. That said, there will be no outbreak of disease if the majority continues to be vaccinated. Just avoid vaccines if your child is immune deficient or if you have a family history of autism or other neurological disabilities. Bernard Rimland is the foremost expert on autism & savior of autistic children in the US. Ignore the ignorant first reviewer, & read everything of Rimland's that you can get your hands on.

What a refreshing thing to find! Unlike the other uninformed...who posted untruths, studies are starting to show a definite link between things in Vaccines causing autism... As far as those horrible childhood diseases coming back, are you insane?? We no longer vax for Smallpox (as it killed and mamed more than it helped) and it hasn't come back. There has not been a SINGLE CASE of wild polio in the WESTERN HEMISPHERE in 25 years. It hasn't come back.. Oh accept for those kids who GOT polio FROM the vaccine... OOOPS..I HIGHLY recommend this book. It is ABOUT TIME that the drug companies STOP putting poisons into the vaccines that the GOVERNMENT mandates we inject into our children..More parents need to research this before letting their newborns be injected with Goodness only knows what...

Yes, genes can play a role in autism, but the exact causes of autism are yet unknown, and seem to be many. There's no reason parents should feel any guilt about having a child with autism because it is NOT their fault. The time of parent blaming should be long over, it's sad that it still exists at all.

Even if genes were the sole cause of the disorder, do you really think parents should be blamed for this!? Try informing yourself about autism instead of bashing parents and authors that are trying to help these children. There seems to be a lot of supporting evidence for the vaccine/autism link.
